Marketing Resource Centre**

Re-sizing Images(3)

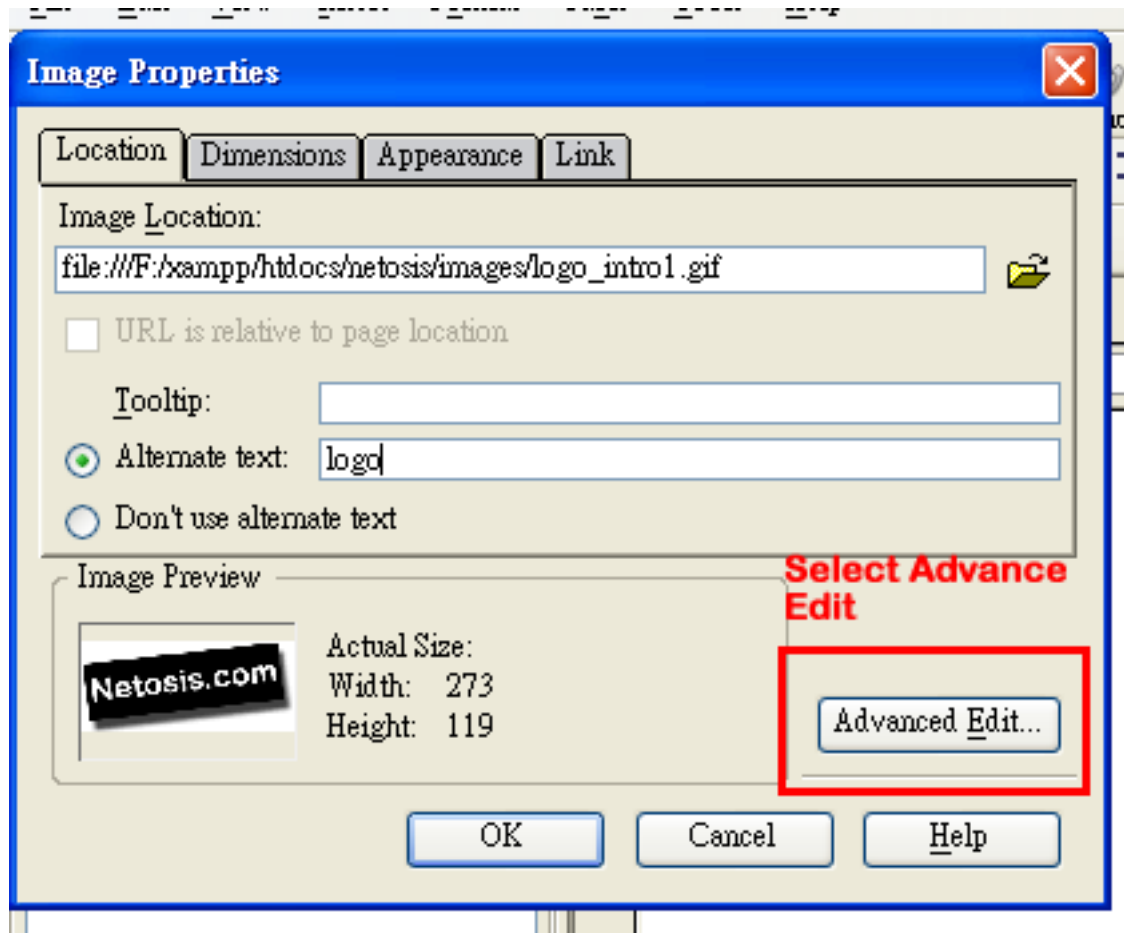

- Click the Dimensions tab to edit these properties:
 - * **Actual Size:** Select this option to undo any changes you've made to the dimensions and return the image to its original size.
 - * **Custom Size:** Select this option and specify the new height and width, in pixels or as a percentage. This setting doesn't affect the original image file, just the image inserted in your page.
 - * **Constrain:** If you change the image size, it's a good idea to select this in order to maintain the image's aspect ratio (so that it doesn't appear distorted). If you choose this option, then you only need to change the height or width, but not both.
