Creating An AnchorLink

- Creating an anchorlink is similar to creating a hyperlink.
- Used to create a link within the same page

Marketing Resource Centre**

Creating An AnchorLink

1. # Click to place the insertion point at the beginning of a line where you want to create an anchor, or select some text.
2. # Click on anchor button or open the Insert menu and choose Named Anchor. You see the Named Anchor Properties dialog box.
3. # Type a unique name for the anchor in the Anchor Name field (up to 30 characters). If you include spaces, they will be converted to underscores (_). If you selected some text in step 1, this box already contains a name.
4. # Click OK. An anchor icon appears in your document to mark the anchor's location:

Creating An AnchorLink(2)

- To create the link on which readers can click to jump to the anchor:
 1. Select the text or image that you want to link to the anchor.
 2. Click the Link button or open the Insert menu and choose Link. You see the Link Properties dialog box.
 - * If you're creating a link to an HTML file on your computer, click Choose File to locate it.
 - * If you're creating a link to a named anchor (target), select it from the list of the anchors currently available in the page.
 - * If you're creating a link to a level heading (for example, Heading 1 - Heading 6), select it from the list of headings currently available in the page.
 3. Click OK.

Creating An Image link

- The steps are same as above except that it is repeated using an image instead of text.
